Energie dreigt onbetaald, de rekening op?

Energierekening gemiddeld ruim 600 euro hoger dan jaar eerder

Door onze economieredactie

Energy Poverty Analysis

X

10% of Income

LIHE

LILEK

- × If you spend more than **10% of your annual income** on energy
- × If your income is within **130% of the poverty line**, and your **energy cost is above the median**
- × If your income is within **130% of the poverty line**, and your **energy cost is above the median** and your dwelling has an **energy label of D or worse**.

10% of Income LILEK

This analysis defines energy poverty as spending more than 10% of annual income on energy.

Horizontal Axis: This axis shows the annual income of the neighborhood. Income data is from 2021 and gathered from [CBS](#). If no income was registered, the median income of Eindhoven is used (€NaN).

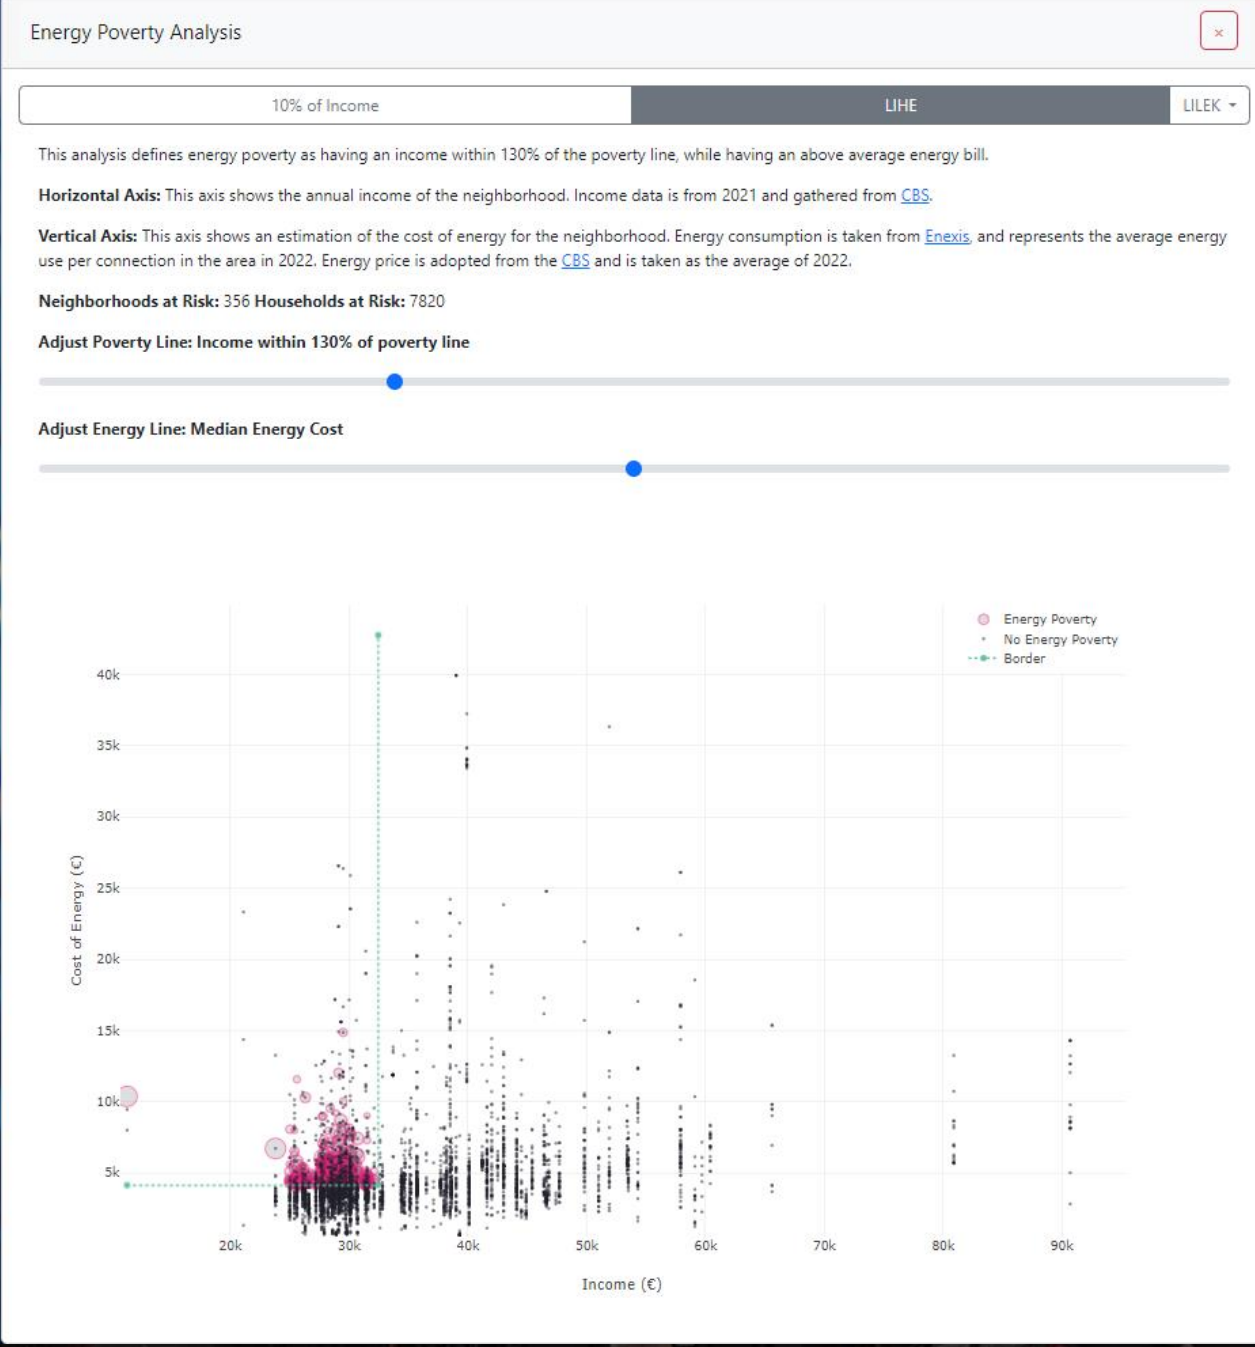

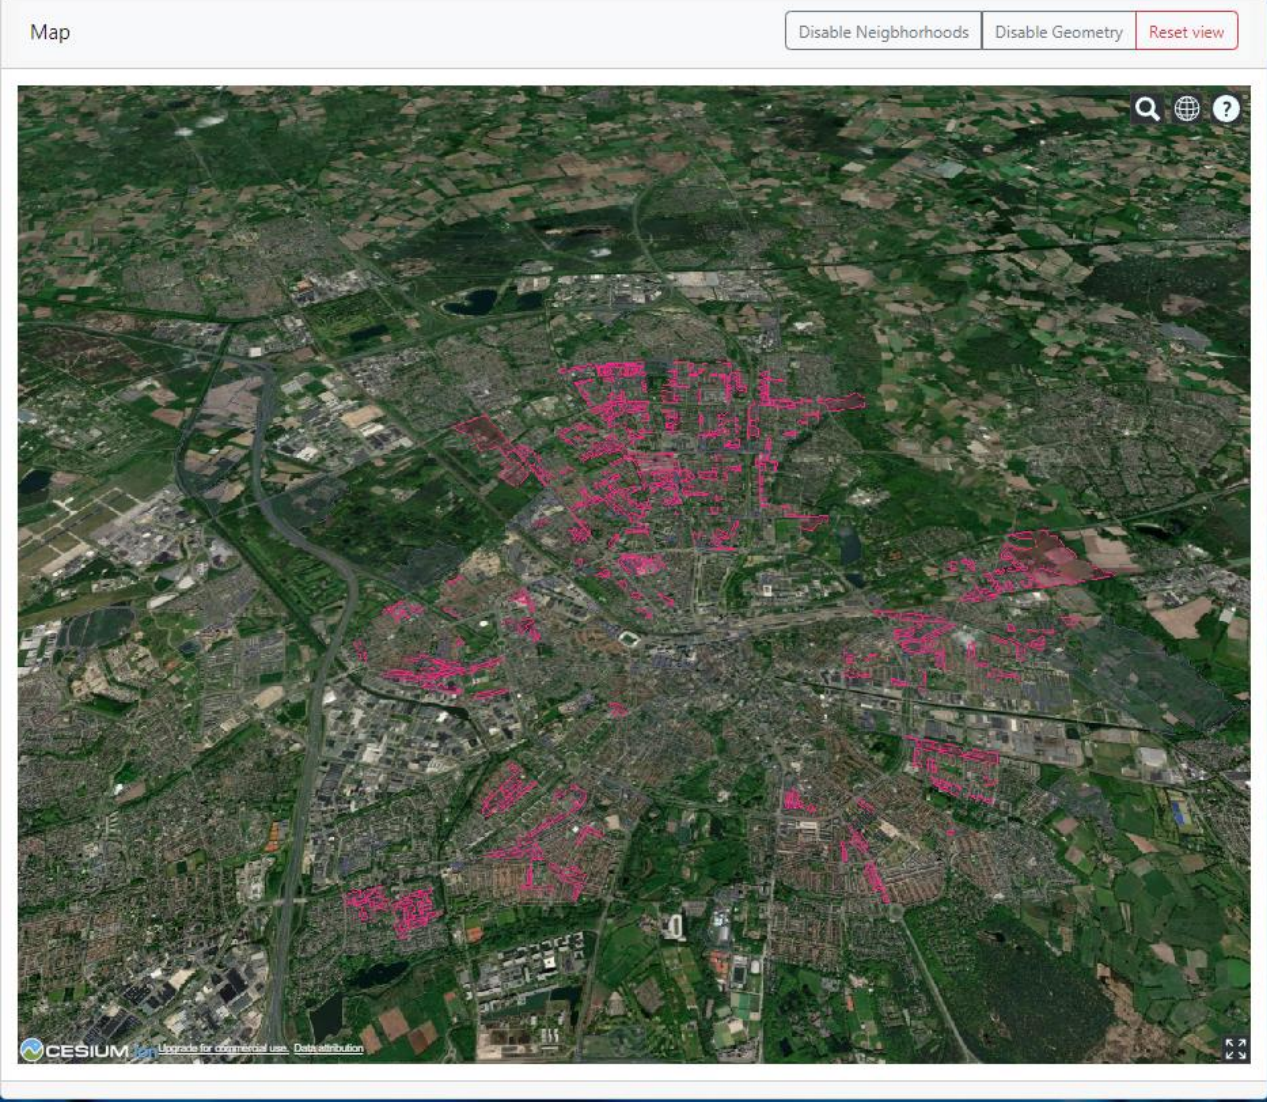

Vertical Axis: This axis shows an estimation of the cost of energy for the neighborhood. Energy consumption is taken from [Enexis](#), and represents the average energy use per connection in the area in 2022. Energy price is adopted from the [CBS](#) and is taken as the average of 2022.

Neighborhoods at Risk: 2843 Households at Risk: 57170

Energy data

Predictive Analytics

Missing Data

Of **136122 buildings** in Eindhoven, **51099 (37,5%)** have an **unknown energy label**

Using **construction year, footprint, building value (WOZ), electricity and gas use**, can we predict the unknown energy labels?

No.

Missing Data

LILEK: 'Same as LIHE, except with dwelling **energy label below C**.'

Can we predict these **two categories** (above or below C)?

Yes!
