IZVLEČEK

V raziskavi smo se osredotočili na sistematični pregled literature o objavljanju geoprostorskih podatkov (linked data – LD) pri geodetskih upravah evropskih držav, odgovornih za zemljiško administracijo. Analizirali smo znanstvene študije, objavljene v letih od 2014 do 2023. Naša raziskava je bila usmerjena v odkrivanje vzrokov za razmeroma počasno uveljavljanje LD-tehnologij za objave geoprostorskih podatkov. Zato smo iskali razloge, najpogostejše težave, rešitve in izzive za objavo prednostnih tem geoprostorskih podatkov pri geodetskih upravah. Uporabljena raziskovalna metodologija temelji na dobro uveljavljenih pristopih, kot so analiza problemov, posegov, primerjav, izidov in okoliščin (PICOC) ter iskanje s tako imenovanim »vzratnim valjenjem snežne kepe«. Postopek presoje upravičenosti za vključitev člankov v sistematični pregled literature je predstavljen v Smernicah za prednostne postavke poročanja za sistematične preglede in metaanalize (PRISMA). Pri branju celotnega besedila končnega nabora devetnajstih izbranih člankov smo analizirali vsebino in identificirali dvanajst ključnih področij. S frekvenčno analizo smo pridobili pregled LD objavljenih geoprostorskih tem, ki so najpogostejše objavljene pri geodetskih upravah

KLJUČNE BESEDE

povezani podatki, geodetske uprave, geoprostorska semantika, interoperabilnost, sistematični pregled literature

ABSTRACT

This research focuses on a systematic literature review of the geospatial Linked Data (LD) publication at National Mapping and Cadastral Agencies in Europe (NMCA) responsible for land administration. We analysed scientific studies published from 2014 to 2023. Our research aimed to find out the reasons for the relatively slow adoption of geospatial data publication as LD. Therefore, we searched for the most common problems, solutions, and challenges for publishing prioritised data themes in NMCAs. Applied research methodology relies on well-established approaches such as analysing Population Problems, Intervention, Comparison, Outcomes, and Circumstances (PICOC) and backward snowballing. The eligibility process is presented by Preferred Reporting Items for Systematic Reviews and Meta-analyses (PRISMA) guidelines. We analysed nineteen extracted papers and identified twelve key issues from full-text reading. Frequency analyses resulted in the overview of the most frequently published geospatial themes as LD in several European countries. We addressed five research questions and concluded that in addition to systematic support for developing vocabularies and ontologies, trust, awareness, and knowledge about best practices could influence the success of LD publication at NMCAs.

KEY WORDS

Linked Data, National Mapping and Cadastral Agency, NMCA, geospatial semantics, interoperability, Systematic Literature Review, SLR

Geodetski vestnik

Geodetski vestnik

Geodetski vestnik is the publication of the Association of Surveyors of Slovenia (Zveza geodetov Slovenije) and it is an open access journal, issued quarterly in print and online versions. The journal is designed to serve as a reference source and an archive of advancements in the disciplines that make use of the geodetic, geospatial and spatial planning fields.

Current issue: 2023 (67), 2

CONTEXT for Systematic Literature Review

Research project V2 - 2295:

„Developing guidelines
to improve semantic interoperability
in spatial database management and
geoinformatics in Slovenia“

ARRS

SLOVENIAN RESEARCH AGENCY

**Surveying and
Mapping Authority
of the Republic of
Slovenia**

University of Ljubljana

Faculty of Civil and Geodetic Engineering

Project aims:

- Identify the **main obstacles** to **semantic interoperability** at the NMCA
- Find the **optimal combination** of the latest **technologies** and **approaches** of the semantic web for **geospatial LD publication**

Systematic Literature Review (SLR)

PICOC method:

1. **Problem:** siloed geospatial data
2. **Intervention:** publishing geospatial data as Linked Data
3. **Comparison:** web searchability, linkability
4. **Outcomes:** machine-readable, published geodata as open-linked data
5. **Circumstances:** NMCA_s

RESEARCH QUESTIONS for LD implementation at NMCA's:

RQ1: The **main PROBLEMS** for publishing NMCA geospatial data as LD?

RQ2: **SOLUTIONS** and requirements **identified by experienced NMCA's?**

RQ3: **PRIORITY DATA THEMES** already published by NMCA's?

RQ4: What **CHALLENGES/ISSUES** have NMCA's identified?

RQ5: **REASONS** for the relatively **SLOW ADOPTION** of LD by NMCA's?

Existing studies **ANALYSES**

Databases: SCOPUS IEEE Google Scholar

Period: 2014 - 2023

Keywords: linked data (LD) AND geospatial AND NMCA

How to select studies for detail analyses SLR ?

6 criteria:

Table 1: Assessing studies before detailed data extraction with criteria/questions

Criteria	Eligibility question before extraction
C1:	Is the study <u>relevant and essential</u> to our research question?
C2:	Does the study <u>focus on geospatial</u> data?
C3:	Does the study <u>clearly define the problems</u> of LD publication?
C4:	Does the study explain <u>the challenges</u> of LD publication?
C5:	Does the study explain <u>the best practices</u> of LD publication?
C6:	Does the study cover <u>the NMCA's domains</u> ?

Protocol of SLR

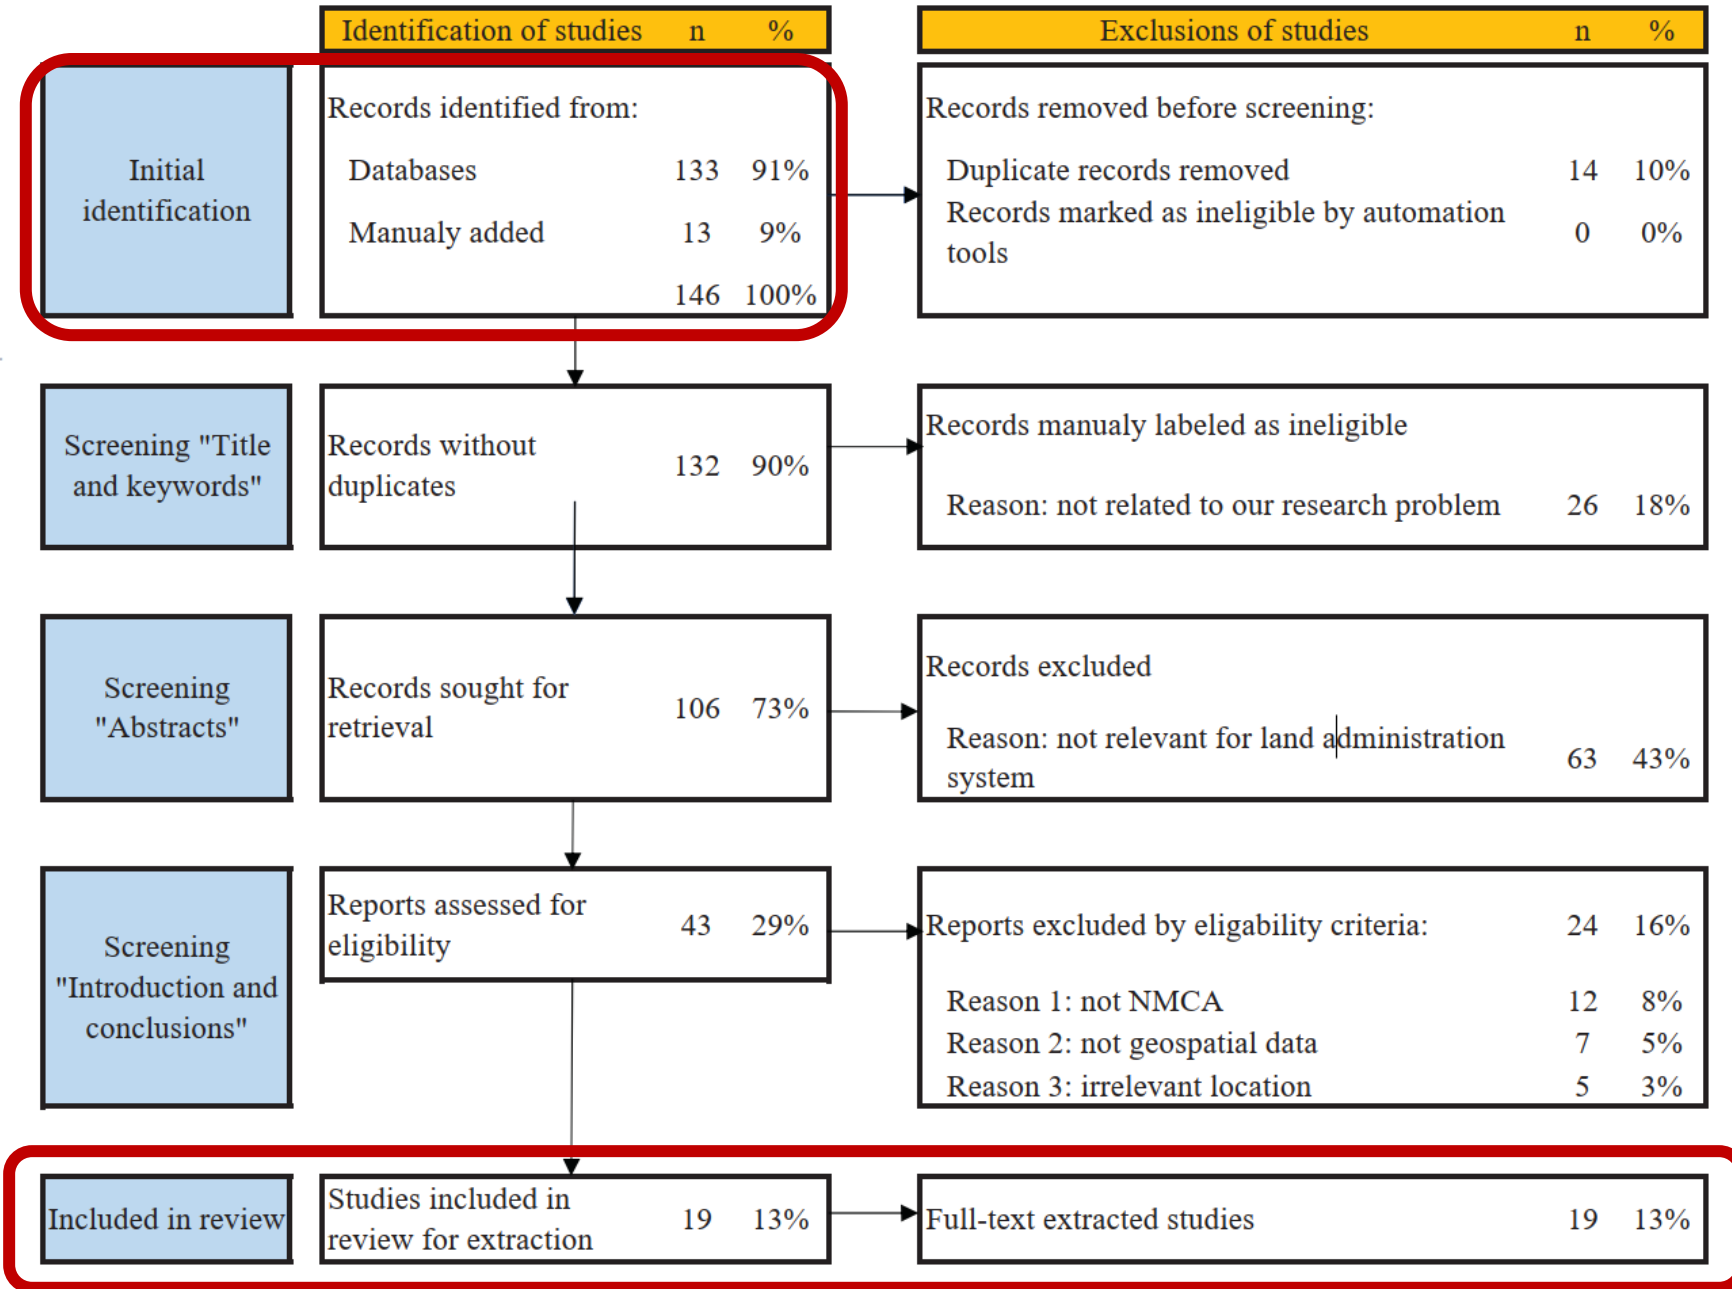

Figure 1: Results of studies selection in the form adopted from the PRISMA 2020 flow chart (Page et al., 2021)

19 most relevant studies according to 6 criteria (1 - 13):

Table 2: Detailed selection of studies and quality assessment criteria

ID	Author	C1	C2	C3	C4	C5	C6	Total score	%
		Relevance	Geospatial	Problems defined	Challenges defined	Best practices	NMCA domain		
1	Saavedra et al., 2014	0.5	1	1	1	0.5	1	4.0	67%
2	Çağdaş and Stubkjær, 2015a	1	1	0.5	0,5	0	1	4.0	67%

SYNTHESIS OF SLR

SMA_s LINKED DATA PUBLICATION

12 key LD issues

from 19 studies

Issues

Table 6: Summary table for the synthesis of data collected from nineteen selected studies on issues of geospatial LD publishing

item	LD issues	description	study ID	count	%
1	interoperability	shared, open data accessibility, reuse, integration - combining different sources	3, 4, 8, 9, 12,15, 17	7	14,3%
2	vocabulary	common thesaurus for the domain terminology, multilingual terminology, cross-border terminology	2, 3, 4, 6, 7, 9, 18	6	12,2%
3	support	users support browsing, searching, querying, analyses, viewing	5, 9, 10, 12, 13, 17	6	12,2%
4	heterogeneity	disjoint semantically, structurally, and syntactically; diversity of contexts, terms definitions	1, 6, 9, 11, 14, 19	5	10,2%
5	ontology	knowledge, semantics, relations, explaining instances meaning to the outside world	4, 7, 9, 11, 18	5	10,2%
6	quality	LD publication quality metrics as completeness, updating, accuracy	1, 11, 16, 19	4	8,2%
7	readability	readability by humans and by machines	4, 6, 9, 15, 18	4	8,2%
8	big data	publishing large datasets, siloed data	5, 8, 9, 14	4	8,2%
9	efficiency	business issues of OLD, publication automation, ETL, time- and cost-efficient delivery, restrictions	8, 14, 17, 18	4	8,2%
10	data context	metadata - information about data	2, 4	2	4,1%
11	serialisation	provide data in different LD formats	4	1	2,0%
12	scalability	a scalable approach to linked data publication	18	1	2,0%

Answers to RQ

- RQ1 **Problems:** heterogeneity, siloed data, metadata, context.
- RQ2 **Solutions and requirements:** vocabularies, ontologies, metadata, standardised technologies.
- RQ3 **Priority data themes:** administrative units (7), place names (3), building identifiers (3), and addresses (2).

RQ4 NMCA's Challenges :

- setting development **priorities**,
- keeping pace with technological **trends**,
- compensating for the **financial costs of data sharing**,
- the **skills of staff** at NMCAs,
- the availability of **best practice guidance**.

RQ5: Reasons for the slow proliferation of LD

- **At public bodies slower adoption** of new technologies, than in private
- **Limited tooling**
- **The lack of knowledge on managing knowledge graphs (KG)**
- **Unable to properly advertise datasets' usefulness** to potential users, thereby **hampering reuse**
- **The lack of sufficiently distinctive and functional browsing and viewing facilities**
- **Publishers do not use LD themselves, and**
- **LD fails to attract IT vendors due to insufficient professional demand.**

Limitations of the study results

the study **did not address:**

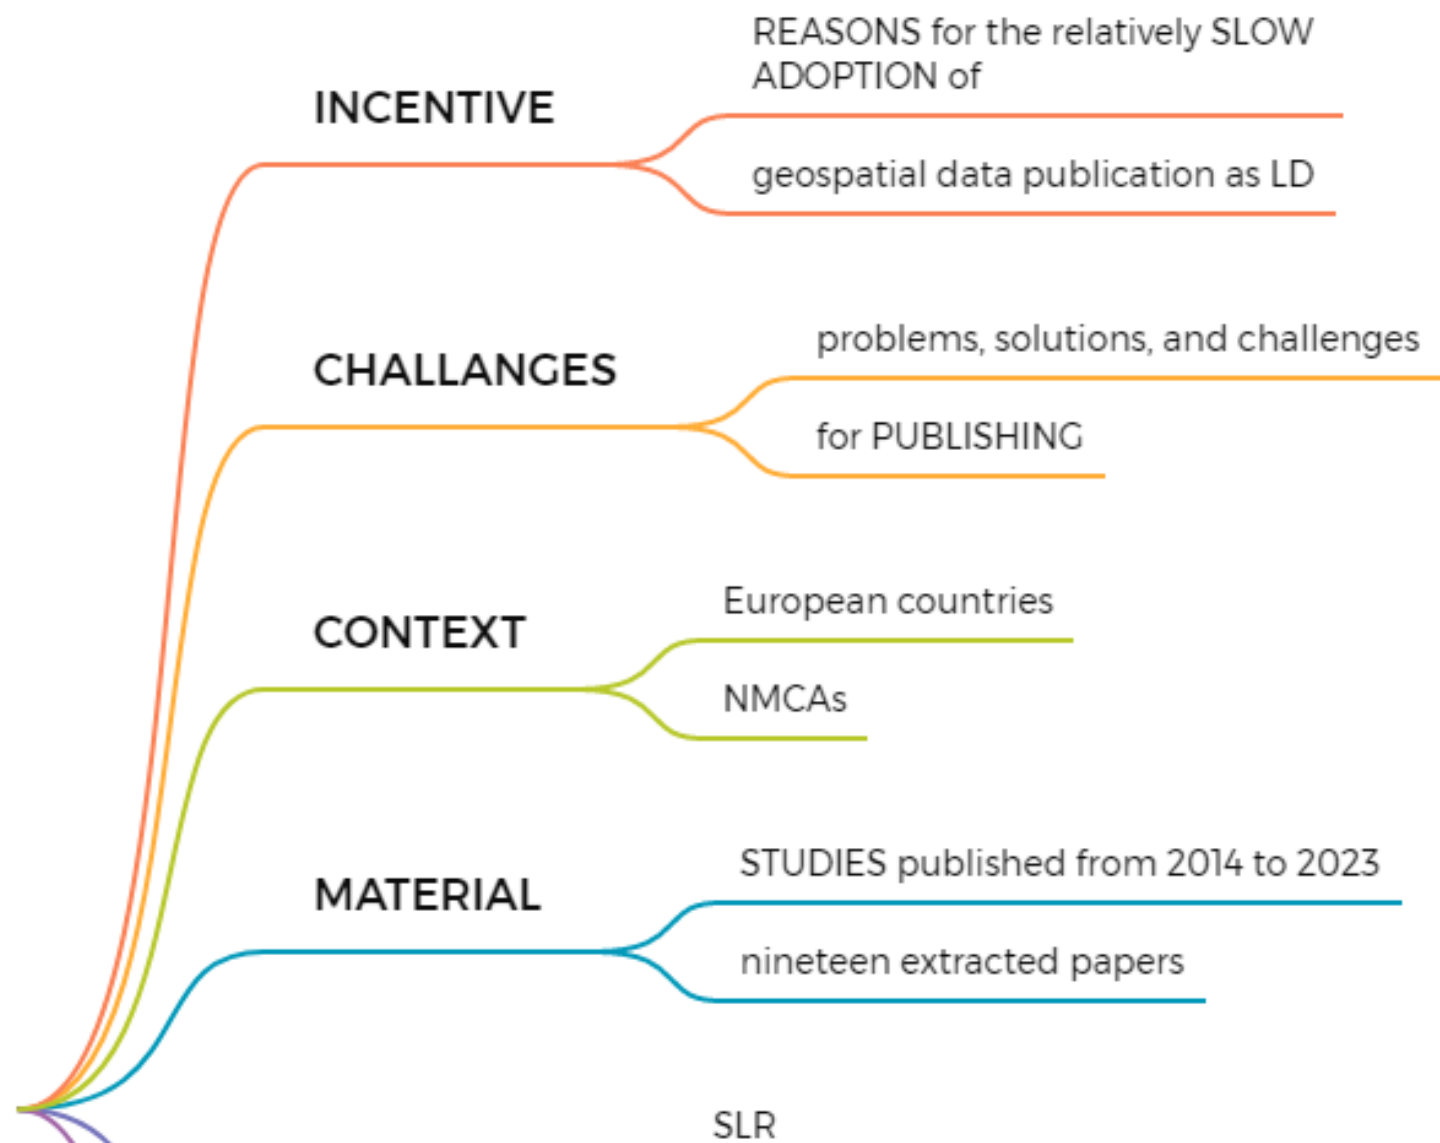

- technologies,
- standards,
- processes, or
- legal issues

for LD publication at NMCAAs.
