Power by izi.TRAVEL

Digital World Issues

Platform issues

- We have to publish several times
- No communication between platforms
- We cannot switch platforms
- We do not own our data
- Platforms can ban any user at will
- Platforms enjoy MONOPOLY

Security issues

- Hundreds of logins/passwords
- Lack of trust
- Most Internet services are insecure
- Lack of services like e-voting, encryption, signatures

Social issues

- Inequality grows
- Fake news and no trust
- Internet is not a free zone
- “1984” in China
- Our digital life importance grows but we do not know what to do

Technical issues

- Different ontologies
- Silos Data
- DOS attack of “Copies”
- We are losing data in confusion

The next gen Web dream

- ▶ The New Decentralized Internet
- ▶ People own their data
- ▶ “Data at origin”
- ▶ Democratic system
- ▶ Secure
- ▶ True Ubiquity (towards IoT)
- ▶ Open protocols
- ▶ Dynamic data structures
- ▶ Interoperability
- ▶ European Data Space

Candidates:

Blockchain

Gaia-X/IDS

MyData

SSI

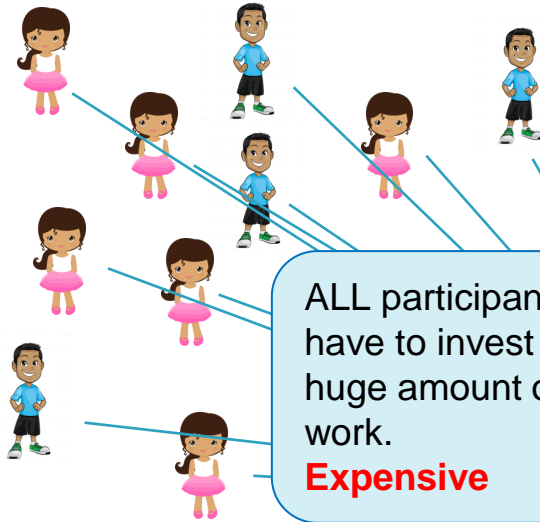

SOLID

Open-source
federated
platforms

Blockchain discussion

Zero trust world

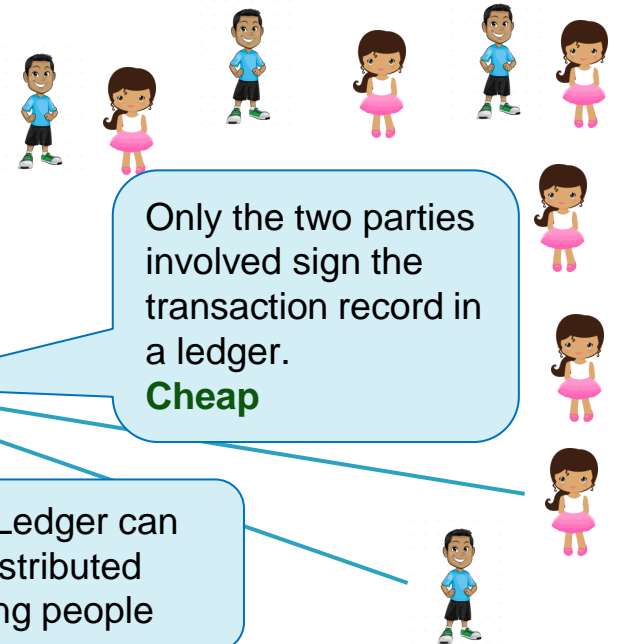

ALL participants have to invest huge amount of work.
Expensive

The Ledger HAS to be global

Debit	Credit	Sum
#548	#488	€32
#765	#756	€233
#064	#239	€1
#236	#969	€24
#230	#235	€290
#233	#987	€112
#892	#233	€78

Trusted world (technologically ensured)

Only the two parties involved sign the transaction record in a ledger.
Cheap

The Ledger can be distributed among people

Solution: Web 3.0 dream

No one knows what is Web 3.0, but we have some ideas:

- ▶ The New Decentralized Internet
- ▶ People own their data
- ▶ “Data at origin”
- ▶ Democratic system
- ▶ Secure
- ▶ True Ubiquity (towards IoT)
- ▶ Open protocols
- ▶ Dynamic data structures
- ▶ Interoperability
- ▶ European Data Space

Web History overview

Where can we use PODs?

Where can we use PODs?

Digital World Issues

Platform issues

- We have to publish content all times
- No communication between platforms
- We cannot switch platforms
- We do not own our data
- Platforms can ban any user at will
- Platforms enjoy MONOPOLY

Security issues

- Hundreds of logins/passwords
- Lack of trust
- Most Internet services are insecure
- Lack of services like e-voting, encryption, signatures

Social issues

- Inequality grows
- Fake news and no trust
- Internet is not a free zone
- “1984” in China
- Our digital life importance grows but we do not know what to do

Technical issues

- Different ontologies
- Silos Data
- DOS attack of “Copies”
- We are losing data in confusion

Security at the core

Web security: SSL

WEB server

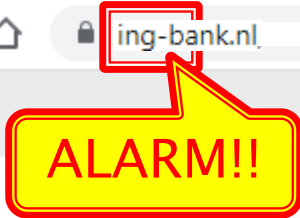

SSL encryption

One-side protection

browser

Security at the core

How will we use our Key/e-passport?

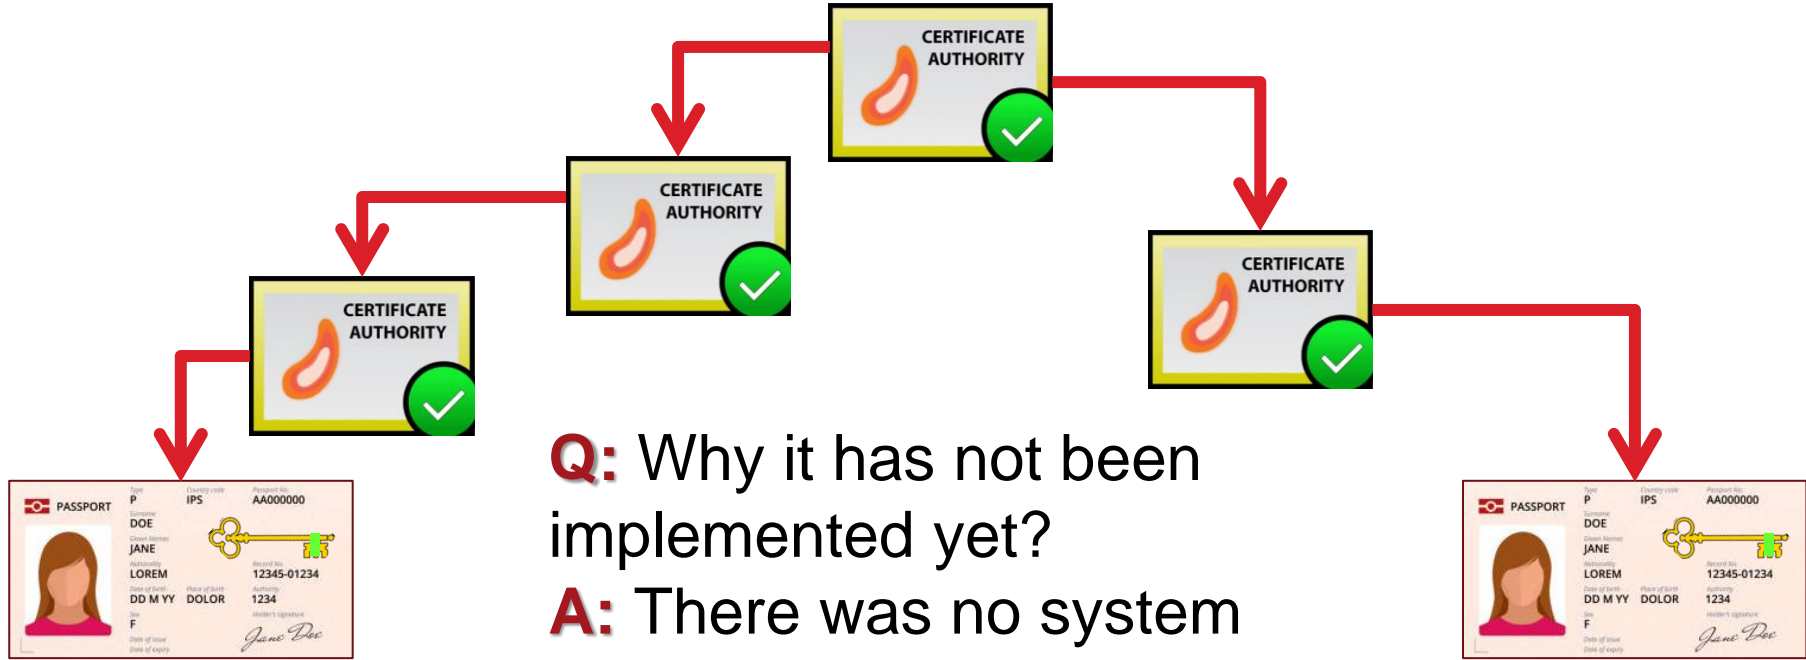

And yes, there will be no more logins/passwords, spam etc

Why don't we have it already?

Public Key Infrastructure (PKI)

Web 3.0 is big enough to implement the global PKI

Digital World Issues

Platform issues

- We have to publish content at times
- No communication between platforms
- We cannot reach all platforms
- We do not own our data
- Platforms can ban any user at will
- Platforms enjoy MONOPOLY

Security issues

- Huge amount of logging passwords
- Lack of security
- Most Internet services are insecure
- Lack of services like e-voting, encryption, signatures

Social issues

- Inequality grows
- Fake news and no trust
- Internet is not a free zone
- “1984” in China
- Our digital life importance grows but we do not know what to do

Technical issues

- Different ontologies
- Silos Data
- DOS attack of “Copies”
- We are losing data in confusion

What are opportunities of Post-Platforms?

Just like WWW, Post-platforms can be used in many businesses

Accommodation

IoT

Real Estate

Open Publishing
in Science
in Music
in Films etc

Banks

Mobile operators

Medical records

On top of that Post-Platforms will affect fundamental things

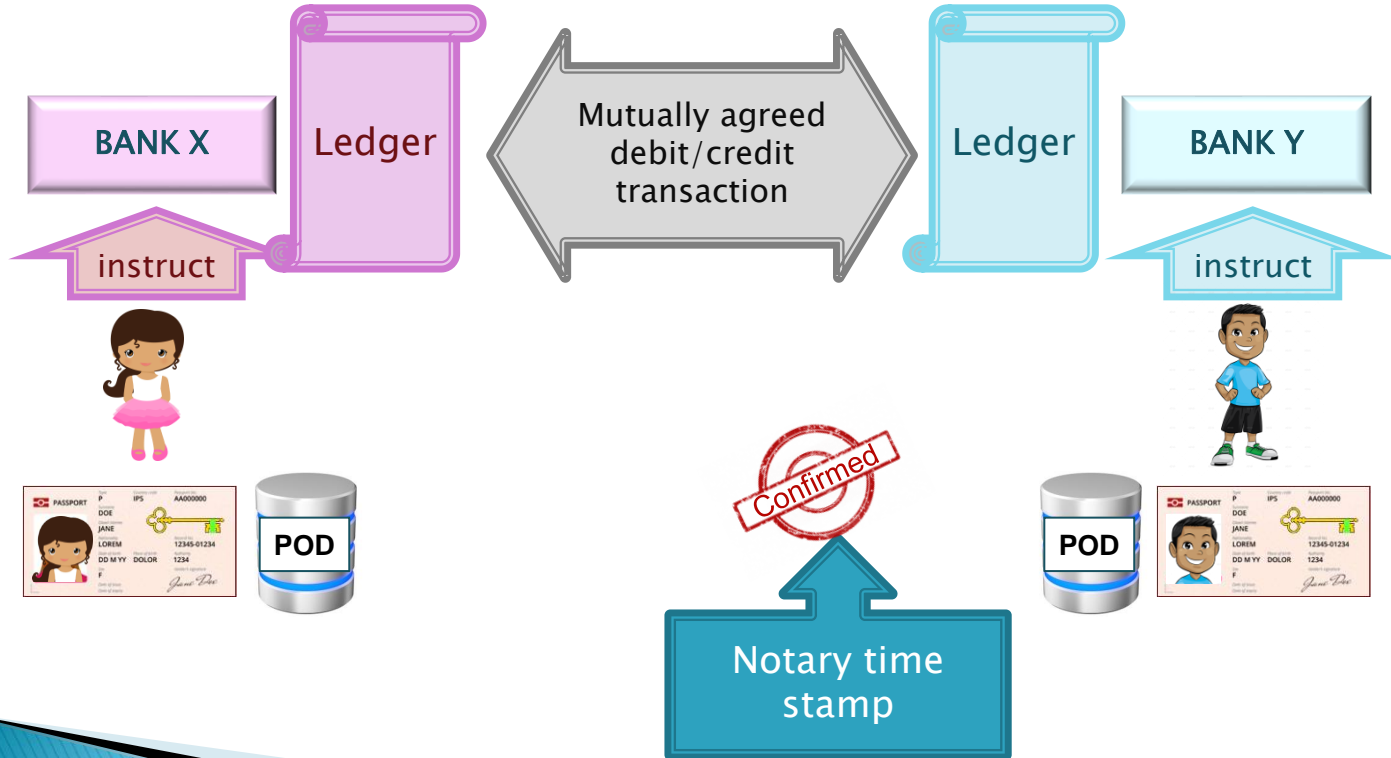

e-passport

Security

e-voting

e-money

e-Money

Whitepaper

Post-Platform approach to the Dynamic Ontologies

prepared by Alex Tourski, alex.tourski@postplatforms.org

open link: <https://cutt.ly/hOqXmah>

Digital World Issues

Platform issues

- We publish several times
- No connection between platforms
- We cannot compare forms
- We do not know what we will
- Platforms can be used in many ways
- Platforms enjoy MOOCs

Security issues

- Hundreds of logins/passwords
- Lack of trust
- Many internet services are insecure
- Lack of services like e-voting, encryption, signatures

Social issues

- Inequality grows
- Fake news and distrust
- Internet is a free zone
- “1984” is a reality
- Our digital importance grows but we do not know what to do

Technical issues

- Different ontologies
- Silos Data
- DOS attack of “Copies”
- We are losing data in confusion

WHY WE MAKE USE ADOPT PUBLICATIONS

INTERNATIONAL DATA SPACES

The future of the data economy is here

What issues do we have with platforms?

2. Alex has to publish his posts twice

4. platform OWNS all the content. It's the MONOPOLY.

3. Alice cannot switch to LinkedIn as all her friends are in facebook

1. Alex cannot send a message to Bob
